

CAPABILITY BRIEF

From proof-of-concept to *production-ready*.

Intelligaia is an AI-centred design and engineering firm. We take AI proofs-of-concept to production-ready solutions — owning the complete outcome from first Workshop to final deployment.

Three stages. One outcome.

Most firms deliver a technical build. We own the outcome — design and engineering working together so that what ships actually gets used.

This lead paragraph sits one step above body copy in the scale, used to open a section.

This paragraph demonstrates body copy in the paged format — *Raleway* at 10.5pt with 1.55 line-height, on a warm cream page rather than pure white. The running header carries the wordmark and document title; the footer carries the contact line, the linked site, and the page number in *Azeret Mono*. Yellow is never used for body text on a light page — only the gold eyebrow and yellow fills on the hex bullets, the quote rule, and the dark callout.

*A pull quote sits here — set in *Trirong* italic against a yellow rule, used once per section for a single line worth emphasising.*

What we deliver

- UX/UI design and scalable, token-based design systems.
- AI POC development — multi-agent, RAG, and LLM integration.
- Front-end and full-stack engineering at enterprise scale.
- Discovery workshops, AI opportunity mapping, and roadmap definition.

The engagement model

STAGE	WHAT IT IS	TYPICAL LENGTH
Workshops	Discovery, AI opportunity mapping, roadmap definition	1–3 weeks
Labs	Proof-of-concept and prototype builds, technical validation	8–12 weeks
Studio	End-to-end design and engineering, running together	Ongoing

3x

OUTCOME

faster deal-cycle time after modernising a global enterprise commerce platform with a micro-frontend architecture.
